SUMMARY

Security Analyst specializing in Security Analysis and SecOps, with hands-on experience in security monitoring, alert triage, and incident handling across enterprise environments. Previously worked as an Associate Technical Engineer at Kyndryl, supporting production systems through automation, system reliability, and incident management, strengthening expertise in root cause analysis and security event response across infrastructure and cloud environments. Skilled in threat detection, log analysis, event correlation, vulnerability identification, and implementing security controls, with the ability to contribute to proactive threat detection and effective incident response in a 24/7 SOC environment.

TECHNICAL SKILLS

- **Security Operations & Monitoring**
SIEM Monitoring (Splunk, QRadar, Wazuh / ELK – foundational), Alert Triage, Incident Management, False Positive Analysis, SOC Documentation .
 - **Endpoint & Network Security**
EDR fundamentals, IDS/IPS concepts, TCP/IP, Firewalls, VPNs, Network Traffic Analysis
 - **Threat & Frameworks**
Phishing, Malware, Brute Force Attacks, Insider Threats, MITRE ATT&CK, OWASP Top 10
 - **Cloud Security Monitoring**
AWS IAM, S3, CloudWatch, CloudTrail, Cloud Security Misconfiguration Detection
 - **Ticketing & ITSM Tools**
ServiceNow, BMC Remedy
 - **Automation & Scripting**
Python, Bash, PowerShell
 - **Security Standards**
ITIL Incident Management, NIST CSF (foundational), ISO 27001 (basic), SOC 2
 - **Vulnerability Assessment**
Nessus (foundational), CVE analysis, remediation tracking
 - **Operating Systems**
Linux & Windows (Server fundamentals), Mac
-

WORK EXPERIENCE

Associate Technical Engineer | Kyndryl

Aug 2023 – Jun 2025

- Supported 24/7 IT operations and monitoring for mission-critical enterprise environments, ensuring system availability and operational stability.
- Monitored and handled incidents using ServiceNow and BMC, performing accurate logging, prioritization, and resolution aligned with ITIL incident management workflows.
- Performed initial investigation and triage of operational and security-related events, distinguishing false positives and escalating validated incidents to relevant teams with detailed context.
- Reduced recurring incidents by 20% through detailed Root Cause Analysis (RCA) and implementation of preventive and corrective controls.
- Automated monitoring, alerting, and job scheduling workflows using Python, Bash, PowerShell, Control-M, and Tivoli OPC, achieving a 30% reduction in manual effort and improved operational precision.
- Managed and maintained secure configurations for IBM Mainframe batch processing environments, ensuring data integrity and compliance with organizational standards.
- Collaborated closely with Security and Infrastructure teams to support secure batch processing workflows and compliance checks.
- Maintained 100% SLA compliance across high-impact systems through proactive monitoring, timely incident response, and effective handovers.

EDUCATION

Bachelor's in Computer Application | SRM Institute of Science and Technology

Aug 2020 – May 2023

- Academic Achievement: Maintained a strong CGPA of 8.71 / 10.0.
 - Relevant Coursework & Technical Foundation: Cybersecurity fundamentals, Computer Networks, Cloud Computing, AI concepts, Python programming, Web Technologies, and Database Management Systems (DBMS).
-

PROJECTS

Security Operations Incident Detection and Investigation

- Analyzed Windows authentication and system logs to identify suspicious login behavior and potential brute-force patterns using SIEM concepts and structured log analysis.
- Investigated security events by building a timeline of activity, validating indicators, and mapping findings to incident response steps including containment and remediation.
- Documented investigation outcomes, response actions, and detection improvement recommendations to demonstrate practical security operations workflows.

Cloud Security Misconfiguration Detection and Response

- Identified common cloud security misconfigurations such as public storage access and over-permissive IAM policies within an AWS environment.
 - Analyzed cloud activity and access patterns using logging and monitoring concepts with AWS CloudTrail and CloudWatch to support detection and investigation.
 - Documented security risks, recommended remediation actions, and proposed monitoring strategies aligned with cloud security and SecOps best practices.
-

CERTIFICATIONS

- AWS Certified Cloud Practitioner – **Amazon**
 - CompTIA Security+ – **In Progress**
 - Cybersecurity & Ethical Hacking (Advanced) – **Guvi**
 - SOC Level 2 – **TryHackMe**
 - Automation & Workflow Optimization – **Kyndryl**
-

VOLUNTEERING

Cybersecurity Community Member – EC-Council

- Actively engage with global cybersecurity professionals through the EC-Council Cybersecurity Community.
 - Contribute to discussions on ethical hacking, cloud security, detection techniques, and emerging threats.
 - Participate in community initiatives focused on OWASP Top 10, MITRE ATT&CK, and defensive security practices.
 - Support knowledge sharing by helping beginners understand security labs, web vulnerabilities, and Linux basics.
 - Committed to continuous learning and advancing cybersecurity awareness within the community.
-

ACHIEVEMENTS

- Contributed to workflow automation initiatives at Kyndryl that resulted in a 30% reduction in manual effort across batch operations.
- Reduced recurring incidents by 20% by supporting RCA activities and implementing recommended preventive measures.
- Successfully contributed to data center migration, ensuring smooth transition of critical batch workflows and systems.
